

LED molding type

LED can-sealed type

PCB for micro wave

SiC

Carbon Nanotube

## Alpha Tek Corporation - Company Profile

Alpha Tek was established in April 2000 as a manufacturing base of special purpose LED and sensors for electronics and medical use. In addition to OEM production, we have our own brand of products. Our headquarters is based in Osaka with our plant located in Kyoto (Kameoka-city) where we are fully equipped with the state-of-the-art production and inspection equipment. We are ready to meet the growing demand from the Japanese marketplace and worldwide.

In addition to the production of special LED and sensors, we also provide advanced materials such as SiC crystals, Micro-waver circuit boards, and Carbon Nanotubes - three products lines of our non-manufacturing activities for export and import.

Although we are still a small company, we are rapidly expanding our business despite the sluggish economy worldwide on the basis of our close relationships with many researchers within major Japanese companies. Our business strategy toward the future is as follows:

- 1) Aim at the specific niche market first and later expansion to the larger market
- 2) Outsource the production to become a fab-less manufacturer with QA while maintaining technical support
- 3) **Expand business through retainers located throughout Japan**
- 4) **Focus on development of future materials**

The secret of our success is entrusting our commission based sales force that are expert in product knowledge. Our sales channels are thus established and overhead cost is minimized. Our company recently became an authorized sales representative of Nafine Chemical Industry Group Co., the largest CNT manufacturers in China. We are engaged in the market development of Carbon Nanotube (CNT). As many researchers recognize, CNT is the newest, supreme material ever developed. And the potential use of CNT is limitless and versatile.

**Alpha Tek Corporation will be successful by disseminating our business into various industrial sectors throughout Japan and internationally.**
